**GE Fanuc Automation Premier Solution Provider Certification
Awarded To Control Dynamics International**

Houston, TX – 17 Aug 2005 - Control Dynamics International (CDI), an industry recognized leader in designing and implementing some of the world's largest, most complex solutions for automated control systems, today announced it has been certified as a GE Fanuc Premier Solutions Provider for the oil and gas industries.

CDI is currently the only GE Fanuc Premier Solutions Provider in North America awarded Tier 3 level recognition for systems integration capabilities within the oil and gas technology markets. According to Anthony George, CEO of Control Dynamics International, "Earning Tier 3 level recognition is the result of significant and consistent effort from everyone at CDI and it means a great deal to us. We work with controls from a variety of manufacturers and can always count on GE Fanuc to offer the best mix of critical control products and expertise, which are crucial in oil and gas industry applications."

GE Fanuc Automation Americas, Inc., a unit of GE Infrastructure, forms alliances with industry-leading systems integrators and OEMs who have proven skill sets and complementary technology application expertise, following technical, operational and quality evaluations. The rigorous audit process includes an assessment of customer references and knowledge of automation system design and optimization, as well as system configuring and commissioning capabilities. The program also examines a systems integrator's ability to maximize an installed base of automation assets by applying state-of-the-art technologies to enhance functionality for greater return.

At the core of the Premier Solutions Provider concept is the development of a joint business plan in which GE Fanuc and the systems integrator team together to deliver, respectively, products and integration solutions that exceed customers' needs. CDI's primary markets with GE Fanuc are energy, petrochemical and refining.

About Control Dynamics International

Founded in 1991 in Houston, Texas, CDI (www.ControlDynamics.com) has grown to be a recognized industry leader in designing and implementing some of the largest, most advanced control solutions for all segments of the hydrocarbon supply chain; upstream, midstream and downstream. CDI has completed over 1,000 process control projects worldwide, including Distributed Control Systems (DCS), Programmable Logic Controllers (PLC) and Hybrid Distributed Control Systems.

CDI employs certified Professional Engineers (PE's) and Project Management Professionals (PMP's), degreed in electrical engineering, computer science and chemical engineering. As an ISO 9001:2000 certified company, the CDI project methodology encompasses all project phases, including design, life-cycle cost analysis, systems and equipment selection, software development, quality control procedures, and supporting business processes. These rigorous processes and procedures help to assure that projects are on-time, on-budget, and meet the high reliability requirements of the energy industry.
